1. PROJECT TITLE

My project title is “ **EMPLOYEE MANAGING SYSTEM**”. This system is a web based portal developed in OOPS & RDBMS platform. It will allow online enquiry, Employee Registration, Perform test if required, stored test results, display result over the web, modify Employee profile, see office schedule etc. EMPLOYEE MANAGING SYSTEM Project consist of two functional elements: First one is Employee Management with enhanced Employee module for Registration, Edit Profile, View Test history, Change Password etc. And second is Office Management which consists Online Test/Quiz Module for Start test, give examination, calculate results, store test results, manage question banks, display result etc.

Basically, it is designed to attract the Employee who is already working in office and want some promotions in office for another post. So perform this function they must be enroll for internal exam which is conducted in office. So, this project provides a smooth and more reliable platform.

2. INTRODUCTION AND OBJECTIVE

Introduction:

The “**EMPLOYEE MANAGING SYSTEM**” has been initiated for many different reasons. This is very effective platform for manage the Employees and their information using online platform. It also provides an interface where office/university performs various task to manage the Employee and their promotions effectively such as Registration, Edit Profile, View Test history, Change Password, Online Test/Quiz Module for Start test, give examination, calculate results, store test results, manage question banks, display result etc.

Objective:

With the help of this proposed project we can able to full fill the following objectives:

- ★ This is very cost effective Employee management system.
- ★ It reduces the efforts and problem over manual approach.
- ★ It allows a large no of Employees to participate simultaneously with offices/university.
- ★ Employees can also share their feedback with office/university.
- ★ Office/University can also send information to the respective office/Employees via mail or sms.
- ★ It provides more secure platform with user friendly environment.
- ★ It is beneficial for every offices/university.
- ★ It is very effective medium for quick management.

3. PROJECT CATEGORY

“EMPLOYEE MANAGING SYSTEM” is an OOPS and RDBMS based system. It will be implemented using Front End platform, Object Oriented Programming Language and back end platform used as a database.

So Project Category is **OOPS/RDBMS**. Where following platform will used:

- ★ **Front End** : PHP
- ★ **Back End / RDBMS** : MY SQL
- ★ **Internet Technology** : HTML, DHTML, Java Script, CSS
- ★ **Interface** : XAMPP
- ★ **Web Server** : Apache

4. PURPOSE AND SCOPE

Purpose:

The purpose of “ **EMPLOYEE MANAGING SYSTEM**” is to conduct entire registration and promotions process with the help of web based system. Office/University also able to view & manage the Employees details, publish hall ticket, date sheet, exam details as well as result. They can also able to coordinate with Employees using sms/email etc.

Scope:

The scope of this proposed system i.e. “ **EMPLOYEE MANAGING SYSTEM**” is very broad to compare with the current system of manually management of Employees in office/university. Manually Employee’s management is very tough and time consuming. To manage these lots of manpower required. So, we want to make this system more reliable and fast after implementing this proposed project. It also very cost effective system comparing with manual system. It is web based system so, it can be used anywhere & any time by the Employees and office/university representative as per their access level. User location doesn’t matter and one more important thing is that, This proposed system provide secure and fast platform.

5. SURVEY OF TECHNOLOGIES

For preparing this proposed project (i.e. “ **EMPLOYEE MANAGING SYSTEM**”) there are so many technologies available in the current market. But after lots of survey & discussion we found that following platform is suitable for this proposed project:

- ★ **Front End** : PHP
- ★ **Back End / RDBMS** : MY SQL
- ★ **Internet Technology** : HTML, DHTML, Java Script, CSS
- ★ **Interface** : XAMPP
- ★ **Web Server** : Apache

6. REQUIREMENTS AND ANALYSIS

6.1 PROBLEM DEFINATION

“ **EMPLOYEE MANAGING SYSTEM**” is introduced as a web based project for office/university. By the help of this proposed system they can able to manage their Employees effectively. To perform registration and management, first of all I have to make a website for the office/university, which will provide an interface where Employee can easily involve in enquiry, registration, promotions, exam details, office test details, result etc. They can also able to see the reply by the office/university on their question/feedback after registration with website. Now the toughest part of this project is that how we manage the different Employees and their details with office/university environment and their work culture. Thus, this is the main problem area of the proposed project. As solution we divided this problem into sub-problems to solve the current problem easily.

- ★ New Employees details & information Management
- ★ Existing Employees details & information Management
- ★ Exam & Result Management
- ★ Office/University administration management

6.2 REQUIREMENT SPECIFICATION

“ **EMPLOYEE MANAGING SYSTEM**” is an online/web based project. It is designed according to the following groups/Departments:

- ✓ New Employees Group – Promotions Department
- ✓ Existing Employees Group - Management Department
(Including new Employees &

Accounts Department | Library Department | Administration Department

Administrator – IT | Administrator – Infrastructure | Administrator – Miscellaneous

- ✓ Exam & Result Manager Group – Exam Department
- ✓ For Pass out Employees -Promotions Department
- ✓ Administrator for this system/Software – Administrator
Department

This group requirement defined on the basis of manual survey with staff and faculty member of the office/university. After lots of research from literature survey team, Survey Organizers, meetings with the similar type work Organizers, and developer’s personal experiences above group will be created for this system.

6.3 PLANNING AND SCHEDULING

Planning and scheduling technique for this project I choose Gantt chart. It is a graphical representation of the duration of tasks against the progression of time.

Task achieved (in weeks)	1	2	3	4	5	6	7	8
Analysis								
Requirement Gathering								
Design								
Coding								
Testing								
Implementation								
Maintenance								

6.4. SYSTEM REQUIREMENT SPECIFICATION

HARDWARE & SOFTWARE

Platform		Minimum	Recommended
SOFTWARE & HARDWARE	Processor	3.0 Gigahertz (GHz) Core 2 Duo processor or higher	Core i3/ Core i7
	RAM	2 GB	4 GB
	HARD DISK	120 GB	500 Gb
	Display	800 X 600 256 colors	1024 X 768 High Color – 16-bit or more
	Mouse/Key Board	Compatible with System	Compatible with System USB
	Operating System	Microsoft® Windows XP/2007	Microsoft® Windows XP , Windows 2007 or Higher
	Database	My SQL	My SQL
	Software Tools	Xampp, PHP, My SQL	Xampp, PHP, My SQL
	Web Server	Apache	Apache
	Browser	IE 7.0	Mozilla Firefox ,Google Chrome

6.5 MODULE DESCRIPTION

Following module used in proposed project as per mention in requirement specification:

- ✓ New Employees Group – **Registrationby Department**
- ✓ Existing Employees Group - **Management Department**
(Including new Employees &

Accounts Department | Library Department | Administration Department

Administrator – IT | Administrator – Infrastructure | Administrator – Miscellaneous

- ✓ Exam & Result Manager Group – **Exam Department**
- ✓ For Pass out Employees -**Promotions Department**
- ✓ Administrator for this system/Software – **Administrator Department (Top level Manager/Director)**

I. Registration Module for promotions department:

The basic purpose of this module is to provide an interface for new Employees who want to register with office. With the help of this module Employee able to enquiry with office, fill registration form, get registration details, and get registration conformation, ID card etc for job promotions exam.

II. Management Module: This module includes Accounts Department, Library Department, and Administration Department. Under Administration dept. – IT Dept., Infrastructure and other Miscellaneous Department works.

III. Exam Module for exam department: This module is group of those members who involve in work related to examination. They are responsible to upload exam detail, Hall Ticket/ Admit Card, exam information, date sheet etc. They are also responsible for sending message to the Employees for their job promotional exam time table.

IV. Promotions Module for promotions department: This module involved in promotions work of the office/university. The Employees cleared their exam then further served by Promotions Module. The main responsibilities of this module are promotions.

V. Administrator Module (Top level Manager/Director): They involve in manage the overall system on secure level. They may be from IT or Admin Department. Or top level manager/ Director of this proposed system.

7. SYSTEM DEVELOPMENT LIFE CYCLE

SDLC is beneficial to develop any project because it describes how programs are developed. There are several life cycle models available in the industries, which has been tested and implemented over a long period of time. Following are some model which is used in SDLC Phase of the Project/System.

- ✓ Waterfall Model
- ✓ Prototype Model
- ✓ Spiral Model
- ✓ Fourth Generation Techniques
- ✓ Object – Based Methods

We can choose any above mention model to develop “ **EMPLOYEE MANAGING SYSTEM**” for required application and desired result, but after detailed studying and lots of research it was decided to develop this proposed projecton the basis of the Waterfall Model because it is easy to implement and in this system there are no more feedback/improvement required. So, that **I Choose Spiral Model for Proposed System** i.e. “ **EMPLOYEE MANAGING SYSTEM**”

11. DATA STRUCTURE

New Employee Table:

Sl. No.	Field Name	Data Type	Description
1.	Name	Varchar(20)	Employee Name
2.	Father Name	Varchar(20)	Father Name of Employee
3.	D.O.B	Date	Employee Date of Birth
4.	Programme	Varchar(5)	Programme/post for exam
5.	Education Details	Varchar(20)	Previous Education Details
6.	Sex	Varchar(6)	Employee sex
7.	Address	Varchar(50)	Employee Address
8.	Email Id	Varchar(20)	Email Id of Employee(Primary Key)
9.	Contact No	Varchar(12)	Contact No. of Employee

Existing Employee Table:

Sl. No.	Field Name	Data Type	Description
1.	Name	Varchar(20)	Employee Name
2.	Enrollment No./id	Varchar(10)	Enrollment No. of Employee
3.	D.O.B	Date	Employee Date of Birth
4.	Programme	Varchar(5)	Programme/ post for exam
5.	Education Details	Varchar(20)	Previous Education Details
6.	Sex	Varchar(6)	Employee sex
7.	Address	Varchar(50)	Employee Address
8.	Email Id	Varchar(20)	Email Id of Employee(Primary

			Key)
9.	Contact No	Varchar(12)	Contact No. of Employee

Exam Table

Sl. No.	Field Name	Data Type	Description
1.	Name	Varchar(20)	Employee Name
2.	Enrollment No./id	Varchar(10)	Enrollment No. of Employee(Primary Key)
3.	Programme	Varchar(5)	post for exam
4.	Course Code	Varchar(5)	Course code

Result Table

Sl. No.	Field Name	Data Type	Description
1.	Name	Varchar(20)	Employee Name
2.	Enrollment No./id	Varchar(10)	Enrollment No. of Employee(Primary Key)
3.	Programme	Varchar(5)	post for exam
4.	Result Status	Varchar(5)	Result Status with marks

Promotions Table

Sl. No.	Field Name	Data Type	Description
1.	Name	Varchar(20)	Employee Name
2.	Enrollment No./id	Varchar(10)	Enrollment No. of Employee(Primary Key)
3.	Programme	Varchar(5)	post for exam
4.	Promotions Status	Varchar(5)	Promotions Status

Administrator Table:

Sl. No	Field Name	Data Type	Description
1.	User Name	Character	Administrator Name(Primary Key)
2.	Password	Character	Administrator Password

12. PROCESS LOGIC

“ **EMPLOYEE MANAGING SYSTEM**” is a web based platform by which office/universities are able to manage their Employees effectively using web based medium. It is designed on the basis of following groups/Module/department:

- I. Registration Module**
- II. Management Module**
- III. Exam Module**
- IV. Promotions Module**
- V. Administrator Module**

I. Registration Module for promotions department:

The basic process of this module is to provide an interface for new Employees who want to register with office. Following are the process logic for this module:

- ★ Employees able to enquiry with this module
- ★ Registration form filling
- ★ Provide registration details
- ★ Send registration conformation mail to Employee

- ★ Provide ID card etc.

II. Management Module: This module includes following process:

- ★ Fee Management by Accounts Department
- ★ Book Management by Library Department
- ★ Infrastructure management by Administration Department
- ★ Computer Lab managed by IT Dept.
- ★ Other work managed by Miscellaneous Department

III. Exam Module for exam department: This module is group of those members who involve in work related to examination. Following are process logic of this module:

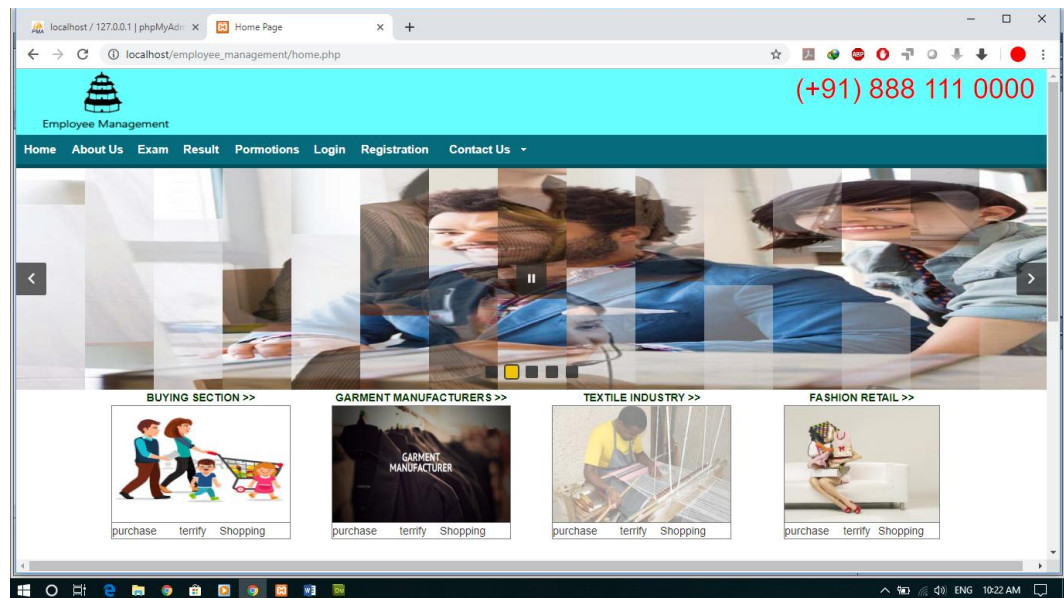

- ★ Publish Promotional Exam Date Sheet
- ★ Upload Promotional exam detail,
- ★ Upload Hall Ticket/ Admit Card,
- ★ Check answer sheet
- ★ Publish Promotional exam Result

IV. Promotions Module for promotions department: This module involved in promotions work of the office/university. The Employees cleared their exam then further served by Promotions Module. The main responsibilities of this module are promotions.

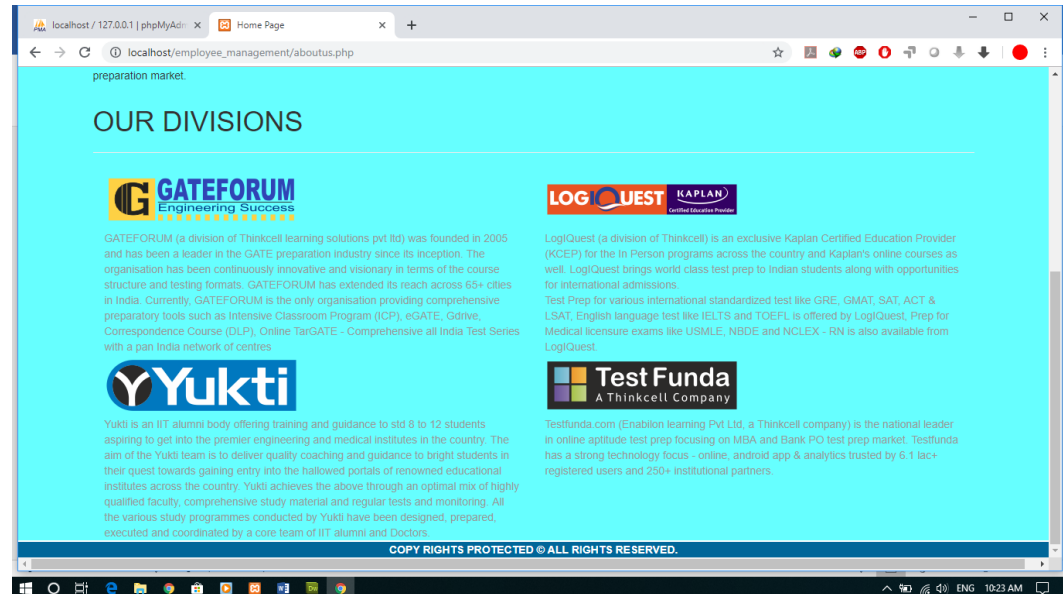

V. Administrator Module (Top level Manager/Director): They involve in manage the overall system on secure level. They may be from IT or Admin Department. Or top level manager/ Director of this proposed system.

16. PROCESS LOGIC

“EMPLOYEE MANAGING SYSTEM” is a web based platform by which office/universities are able to manage their Employees effectively using web based medium. It is designed on the basis of following groups/Module/department:

- VI. Registration Module**
- VII. Management Module**
- VIII. Exam Module**
- IX. Promotions Module**
- X. Administrator Module**

I. Registration Module for promotions department:

The basic process of this module is to provide an interface for new Employees who want to register with office. Following are the process logic for this module:

- ★ Employees able to enquiry with this module
- ★ Registration form filling
- ★ Provide registration details
- ★ Send registration conformation mail to Employee
- ★ Provide ID card etc.

II. Management Module: This module includes following process:

- ★ Fee Management by Accounts Department
- ★ Book Management by Library Department
- ★ Infrastructure management by Administration Department
- ★ Computer Lab managed by IT Dept.

- ★ Other work managed by Miscellaneous Department

III. Exam Module for exam department: This module is group of those members who involve in work related to examination. Following are process logic of this module:

- ★ Publish Promotional Exam Date Sheet
- ★ Upload Promotional exam detail,
- ★ Upload Hall Ticket/ Admit Card,
- ★ Check answer sheet
- ★ Publish Promotional exam Result

IV. Promotions Module for promotions department: This module involved in promotions work of the office/university. The Employees cleared their exam then further served by Promotions Module. The main responsibilities of this module are promotions.

V. Administrator Module (Top level Manager/Director): They involve in manage the overall system on secure level. They may be from IT or Admin Department. Or top level manager/ Director of this proposed system.

17. TESTING

Testing is the necessary part of any project for successful implementation and working. In “**EMPLOYEE MANAGING SYSTEM**” we can use various test models as per requirement. But right now it is on process. So, after proposal & development we do proper testing work to make this system successful.

Future test method may be:

1. Unit Testing
2. System Testing
3. Acceptance Testing
4. Black-box Testing
5. White-box Testing
6. Grey-box Testing

As specialized testing following method also used:

1. Volume Testing
2. Stress Testing
3. Performance Testing
4. Interface Testing
5. Security Testing
6. Debugging

1) Unit Tests: This is the most basic testing mechanism at the developer level.

This covers very narrow and well defined scope. We isolate the code from any outside interaction or any dependency on any module. Unit tests focus on very small unit of functionality. They cover the interaction of the code with memory only and do not cover any interaction with network, database or file systems. These dependencies are hard coded into the code while testing. They provide a

simple way to check smallest units of code and prove that units can work perfectly in isolation. However, we need to check further that when these units are combined they work in a cohesive manner which leads us to further types of tests.

2) Integration Tests: Integration Test forms the next class of tests at the developer level. They provide a mechanism to test the interoperation of smaller units. Integration test involve testing the modules which access network, databases and file systems. They reveal out the issues with network modules or databases and more importantly in the connections between small units of code. Often when the units are wired together there are issues. Unit A might not be giving data properly to the Unit B and these issues come up in the integration tests.

3) Functional Tests: After the integration tests are performed, higher level tests are used. Functional tests check for the correctness of the output with respect to the input defined in the specification. Not much emphasis is given on the intermediate values but more focus is given on the final output delivered.

4) Smoke Tests: Smoke Tests analogy comes from the electronics where a mistake means the circuit board giving out smoke. After functional tests are done a simple test is done from the start typically after a fresh installation and newer input values. Luckily there is no smoke in software industry but yeah, crashes are there to indicate trouble.

5) Regression Tests: Whenever complex bugs are patched in a system, typically which affect the core areas of the system, regression tests are used to re test all the modules of the system.

6) Acceptance Tests: These form the final level of test plan. Every feature is checked from the user's perspective by the testing team and the feature is marked accepted or rejected. These tests test the application from end user's perspective like detecting crashes after going through a certain flow. The results of these tests are very subjective in nature and it takes a while to figure out the exact issue in the code.

Overall Test Result:

Result stage wise	Test Result (0-10 Scale)
User Acceptance testing	8.2
Performance testing	9.2
Security testing	6.2
Errors and Stress testing	7.5
From End Design	9.3
Data Entry	8.8

Reports Design	9.5
Code Testing	8.2
Validation Testing	6.9

18. LIMITATION

1. The main problem to successful this project is converting all office/university manual work to automated work.
2. Sometimes department staff/faculty member not wants to skip their comfort zone (Manual System) to switch computerized system. So, they need extra training and positive motivation to using this system.
3. We have to advertise this system and its benefits to the office/university so that they interested in accepting this type of approach.
4. Web server must be very fast so that Employees/ staff member participates without hanging of server & system. Now we are doing all the work on top priority so that it becomes best system to manage Employee as well as office/university.
5. It is on proposal process so all limitation may be described after successful development of this proposed project.

19. INDUSTRY/ CLIENT INTERFACE

Are you doing this project for any Industry/Client? Mention Yes/No. If Yes,
Mention the Name and Address of the Industry or Client.

Are you doing this project for any Industry/Client? ☐ Yes ☐ No

Remarks: This proposed project “**EMPLOYEE MANAGING SYSTEM**”
should be used by various Industry/office/University in future who want perform
job promotional exam.

20. SCOPE OF FUTURE APPLICATION
